<p>Colostomy bags & wafers</p>	<p>Following a colostomy procedure, a small pouch (the colostomy bag) is placed over the opening in the patient's abdomen to collect waste products that would normally pass through a person's rectum and anus in the bathroom. The wafer is usually nude colored barrier used to protect the skin from the output.</p>	
<p>Ostomy materials</p>	<p>Flextend skin barrier is a cut to fit skin barrier that is convex in shape. It is ideal for those with recessed, retracted and flush stomas. It has a floating flange (used for post-operative abdomens, urostomies & ileostomies) to allow fingers to be placed under the flange, to help minimize pressure on the abdomen when attaching a pouch. Built-in convexity means added security and skin protection for recessed, retracted and flush stomas. Also has discharge-resistant skin barrier with a tape border.</p> <p>Urostomy pouch- transparent</p>
